|--------------------------|--------------------------|--------------------------|
| <input type="checkbox"/> | <input type="checkbox"/> | GDM in current pregnancy |
|--------------------------|--------------------------|--------------------------|

---

I verify that this client has had regular prenatal care which began no later than 24 weeks and an uncomplicated prenatal course. Her case has been considered in light of BBC's risk criteria and she is suitable for midwifery care and birth center birth. She has been screened each trimester while she was in my care to ensure that she remains at low risk for obstetrical complications. She has had nutritional counseling, tailored to her BMI and individual lifestyle, has received current CDC recommendations regarding maternal and neonatal vaccinations, and has also been screened for domestic violence and perinatal mood disorders prenatally. I will continue screening for mood disorders and domestic violence postpartum, beginning during the immediate postpartum period, and will offer the NBS, CCHDS, and hearing screen, following up with any abnormal findings. My client has had access to our medical biller and has had the opportunity to receive an in-person orientation to the birth center and to the financial policies of BBC.
